

INFANTS should ride in **REAR-FACING** car seats *as long as possible*.
Most toddler seats can be used rear-facing up to **35 pounds**
(see manufacturer's instructions).

Harness straps snug & flat.
Chest clip at ARMPIT level.

Carrying handle
DOWN while
driving.

Recline angle
= 30-45°

Harness straps **AT OR
BELOW** shoulder level.

Never put a
child rear-facing
in a front seat
with a passenger
side airbag!

Facing the rear protects a young
child's neck & spinal cord from violent
crash forces, & is very important
until the child is at least
1 year old AND weighs at least 20 lbs.

Let's keep all kids safe while traveling in vehicles!
